

TrackSprint — Agilisium Portal

Project Documentation & Architecture Technical Overview

1. Executive Summary & Purpose

TrackSprint is an enterprise evidence submission, sprint tracking, and training management portal designed specifically for **Agilisium's Batch 12 (Data Engineering & AI Batch)**. The platform enables training leads, administrators, and 27 batch members to assign tasks, submit daily proofs of work, track code explanation rotations, monitor active defaulters, and store evidence securely in cloud infrastructure.

2. Key Modules & Features

- **Code Review Dashboard (Admin Overview):** Real-time KPI metrics for Assigned Users (27), Completed Evidence, Pending Approvals, and Active Defaulters. Includes task filter dropdowns, completion matrix bar charts, and 1-click Export Excel / Bulk ZIP tools.
- **Task Workspace:** Allows Admins to create tasks with due dates, priorities (HIGH, MEDIUM, LOW), and file format restrictions (Images .png/.jpg, Presentations .pptx, Documents .pdf/.docx, and Web Links). Members view assigned tasks and submit proofs.
- **Code Review Tracker:** Cycle-based code explanation tracker for member rotations. Includes single ('+ Insert One-by-One') and bulk marking, grouped daily history timelines, and progress percentages across numbered review cycles.
- **Lucky Spin Wheel:** Interactive canvas spinning wheel pre-loaded with the exact 27 Batch 12 participant names. Features auto-removal after selection and a 1-click 'Reset 27 Names' control.
- **Submissions and Approvals Hub:** Admin review drawer for inspecting uploaded evidence, viewing full-resolution file previews, approving submissions, or requesting re-submission with custom feedback.
- **Defaulters & Reports Hub:** Real-time automated defaulter detection flagging batch members missing evidence for assigned tasks. Supports exporting formatted defaulter Excel reports.
- **Technical Diagnostics & Audit Logs:** Monitors database integrity (HEALTHY PostgreSQL), AWS S3 bucket status (ONLINE), storage telemetry, and maintains a chronological audit trail of all system actions.

3. Technology Stack & Infrastructure

Component	Technology	Description & Specification
Frontend UI	React 18 + Vite	SPA styled with Tailwind CSS, Lucide Icons, and Recharts.
Backend API	Django 4.2 + DRF	Python 3.10 RESTful API with SimpleJWT authentication.
Database	Managed PostgreSQL	Cloud PostgreSQL (tracksprint-db) on persistent SSD storage.
File Storage	AWS S3 Bucket	agilisium-task-portal-evidence in region eu-north-1.
Frontend Host	Vercel	Live at https://agilisium-task-portal.vercel.app
Backend Host	Render	Live with Unicorn at https://internsync-backend-dofy.onrender.com

4. Live URLs & Access Credentials

Access Target	URL / Details	Default Login Credentials
Live Web Application	https://agilisium-task-portal.vercel.app	Monisha.Ramasamy@agilisium.com / Admin123!
Backend API Service	https://internsync-backend-dofy.onrender.com	REST API Endpoint
Django Admin Portal	https://internsync-backend-dofy.onrender.com/admin/	admin@agilisium.com / Password123!
27 Batch 12 Members	Data Engineering & AI Batch 12	Password for all users: User123!
